

**A DATA PROCESSOR CONTROLLED INTERACTIVE DOCUMENT EDITING  
DISPLAY SYSTEM WITH AN IMPLEMENTATION FOR SWAPPING THE  
POSITIONS OF TWO DESIGNATED SEGMENTS OF DATA  
IN A DISPLAYED DOCUMENT**

Abstract

5       A user friendly display interface that expedites the  
switching of positions of a pair of sections with each  
other in a displayed word processing document. The  
invention involves an implementation for defining one  
segment of displayed data in a displayed document  
10 together with defining another segment of displayed data  
in the displayed document, and a function enabling a user  
to select to swap said one segment with said another  
segment. There is a function responsive to such a user  
selection to swap for swapping the positions of the  
15 defined segments of data with each other. As an  
interactive aid to the user, the defined sections may be  
highlighted. The defined sections of data may be text;  
such as a phrase, a sentence, a paragraph or a whole page  
or more. The defined sections may also include images.
